

SUP-D Softgel Capsules

COMPOSITION:

Each Softgel Capsule contains
Vitamin D3 (As Cholecalciferol) 5000 IU

ACTION OF INDIVIDUAL COMPONENT:

Cholecalciferol commonly known as Vitamin D3 is essential for strong bones because it helps the body to use calcium for the diet. Traditionally Vitamin D deficiency has been associated with rickets a condition in which the bone tissue doesn't properly mineralize, leading to soft bones and skeletal deformities.

Concurrently, as one of the most common utilized forms of Vitamin D, cholecalciferol is also very frequently used as a supplement in individuals to maintain sufficient vitamin D levels in the body or to supplement vitamin D deficiency, as well as assisting in various medical conditions that can be associated directly or indirectly with vitamin D insufficiency like osteoporosis and chronic kidney disease, among others.

SUGGESTED USAGE:
